

For setup keycloak realm follow below steps:

- 1) Add new realm name **cerberus-realm**. If realm with same name is already existed first delete that existed realm follow below .

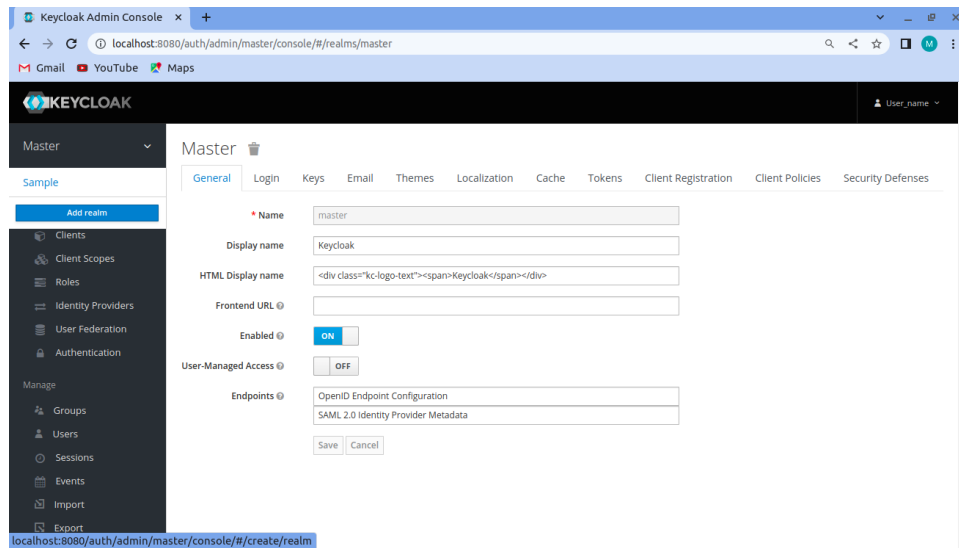

Hit delete icon

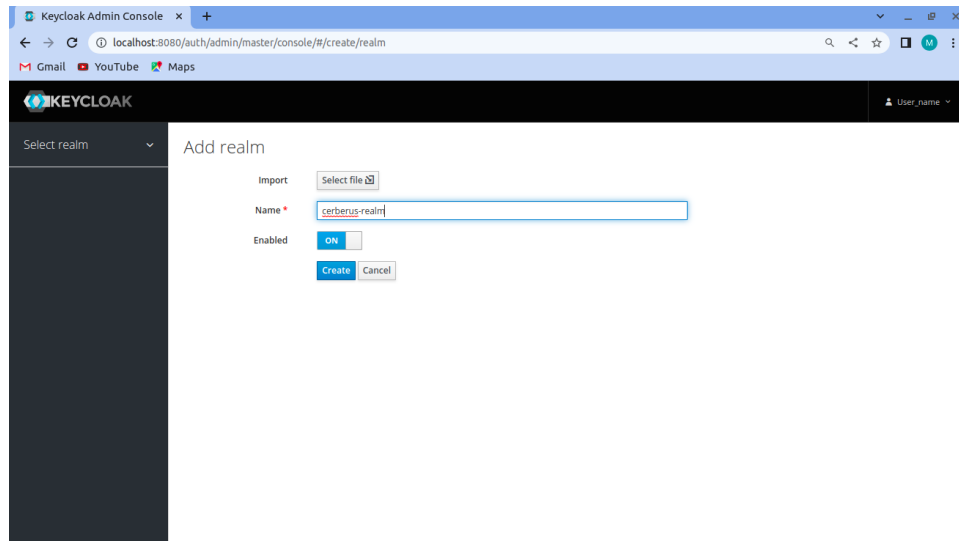

Hit delete button

--> If realm does not existed Add new realm

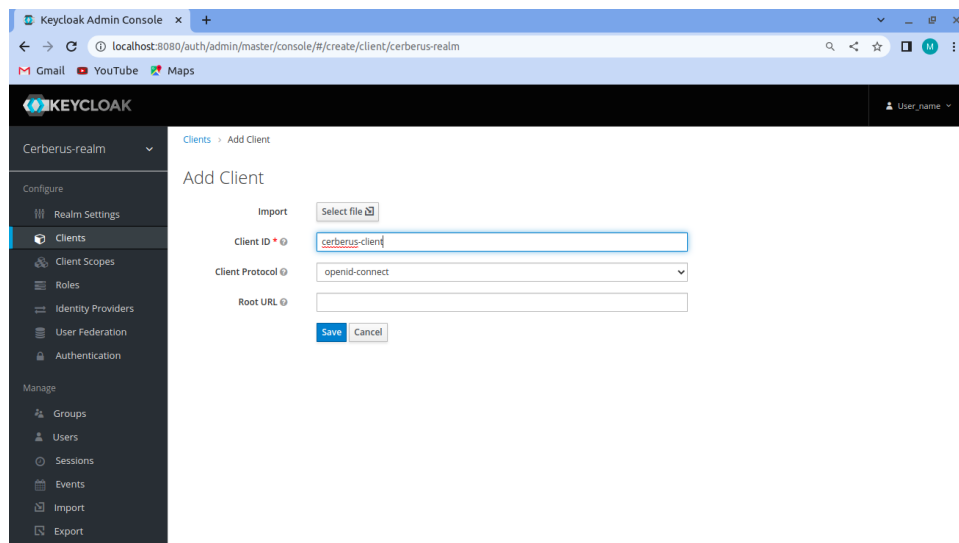

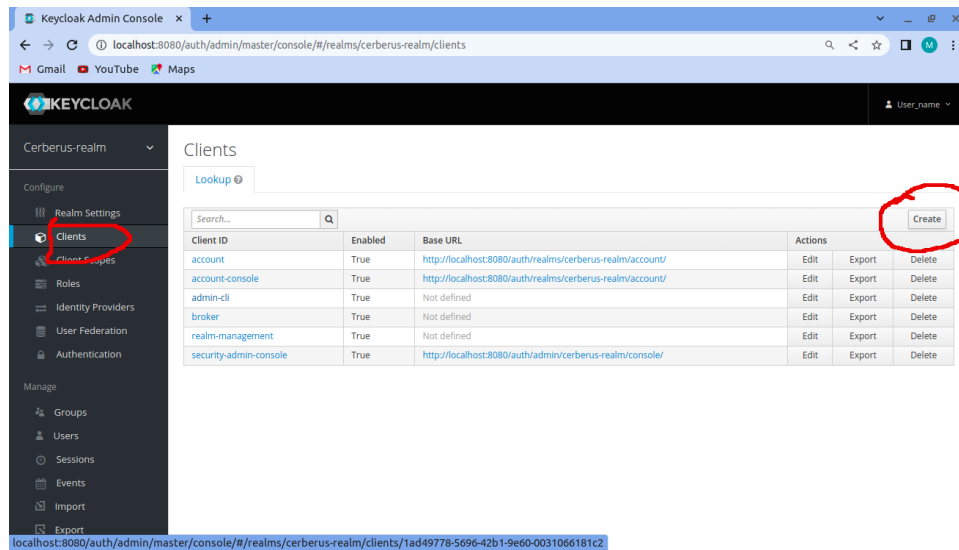

Hit add realm button

Add realm name “**cerberus-realm**” and hit create button

- 2) Now time to create client of that realm, for creation of client we have to go “client” section---> create client

Add client ID as **cerberus-client**, then save,
after we save the cerberus-client we go the settings of that client, and in setting section we have to add
redirect URLs as **http://cerberus.localhost/*** and **web origins *** and save

Keycloak Admin Console

localhost:8080/auth/admin/master/console/#/realms/cerberus-realm/clients/416deca1-0d8a-4ff8-a001-18ad5b0cea0f

Valid Redirect URIs

Base URL

Admin URL

Logo URL

Policy URL

Terms of service URL

Web Origins

Backchannel Logout URL

Backchannel Logout

Backchannel Logout Session Required

Backchannel Logout Revoke Offline Sessions

> Fine Grain OpenID Connect Configuration

> OpenID Connect Compatibility Modes

- 3) After save cerberus-client setting we have to go realm setting ---> login and change some setting **user registration –ON , Forget password—ON** And save

Keycloak Admin Console

localhost:8080/auth/admin/master/console/#/realms/cerberus-realm/login-settings
